Alprazolam: The Key to Anxiety Relief

Alprazolam, also known by the brand name Xanax, is a commonly prescribed medication for the treatment of anxiety disorders. It belongs to a class of drugs called benzodiazepines, which work by enhancing the effects of a neurotransmitter called gamma-aminobutyric acid (GABA) in the brain. This results in a calming effect on the central nervous system, helping to reduce feelings of anxiety and promote relaxation.
